

Compact C Range

Franklin Electric

**Sludge
pumping**

Features & Benefits

Capacity	up to 440m ³ /h
Pressure	up to 24 bar
Temperature	-10°C up to 100°C

Typical applications include:

- Domestic and industrial effluents
- Hydrated lime slurry
- Sludge
- Shear sensitive latex emulsion
- Milk curds, sauces, fruit juices
- Industrial chemicals and detergents
- Starch slurries
- Coating clays, gypsum and silicate
- Paper stocks
- Agricultural slurries

“A competitively priced progressing cavity pump, with a compact construction and maximum performance characteristics.”

Materials of construction

Available in cast iron or stainless steel, with a choice of rotor and stator materials to suit individual applications e.g. hard chrome plated rotor or natural rubber stator.

High pressure / long haul pumping

Can offer considerable project cost savings by utilising small bore pipework and eliminating the need for a series of pumps, when pumping over long distances or with high head requirements.

Low running speeds

Reduced wear for a longer working pump life which extends the periods between routine maintenance. Think of the savings you could make on abrasive applications.

**Waste water
pumping**

Compact unit

As the drive forms an integral part of the unit, the pump is ideal for space-saving installations.

Gentle pumping action

Minimises shear and crush damage to the pumped product.

Surface mounted

Making it easier, cleaner and less hazardous for maintenance.

Up to 8.5m suction lift

Deep sumps can be easily pumped without the use of submersible equipment.

Plug in shaft

Ease of maintenance when assembling or dismantling, with extraction facility.

Viscous products

The pump can be supplied with a square inlet and conveyor to assist viscous slurries into the pumping element.

Inspection cover

Available for applications where rag content is a problem.

Baseplate

Pumps are supplied on a baseplate to ease installation.

Sealed joints

Fully sealed drive train to maximise life and minimise downtime.

Shaft sealing options

Packed gland or single and double mechanical seals are available.

Versatile

Can be installed vertically or horizontally to suit the application. Can be run in either direction.

Robust drives

Specially selected drives and gearboxes for longer life. Options include electric motor drive units supplied as overhead vee belt driven, direct-coupled or variable speed drives with mechanical variable speed or frequency inverter.

Duracoat coating

Rotors can be supplied with Mono's range of specialist coatings to help extend the life of the rotors by increasing wear and corrosion resistance.

Handles gas entrainment

No air or gas locking in the pump. The positive seal formed by the interference fit between rotor and stator enables the pump to self prime and it also allows tri-phase liquids i.e. solids, gases and liquids to be handled easily.

Transfer of industrial
detergents
